

Implementation Services

Expert Deployments, Maximum Value

From project management to deployment, TPx supports smooth, secure technology implementations at every step of your digital transformation.

What It Is

Our comprehensive implementation services support smooth, secure deployment across networks, firewalls, Wi-Fi, and cloud business apps. Deployments are tailored to your unique environment to minimize downtime and disruption—delivered with expert guidance from start to finish.

Project Management

TPx guides your deployment remotely, from start to finish, for an efficient, successful launch.

Implementation

Our remote engineers design, configure, and validate your devices securely from our provisioning center.

On-Site Installation

TPx field techs install and validate on-site; ensuring everything meets spec. (Optional service available as add-on.)

Why Your Business Needs It

Without expert coordination, IT deployments can be delayed or derailed. TPx Project Managers keep everything on track, managing timelines, communication, and expectations across stakeholders. Expert-led provisioning helps ensure your systems are optimized and compliant—ready to go with minimal on-site work and maximum reliability. Some things just can't be done remotely. Our on-site team helps with physical setup and testing so that it's done precisely and with minimal interruptions to your business.

Benefits

- **Expertise:** Clients benefit from specialized knowledge and experience that internal teams may not have.
- **Customization:** Services are tailored to meet the unique needs and challenges of the business.
- **Efficiency:** The service accelerates the adoption process and minimizes the learning curve for staff.
- **Risk Mitigation:** Professional implementation services reduce the risks of implementation failure, data loss, or downtime.
- **Maximized ROI:** Ensures that the product or solution is fully utilized, optimizing your value.

How It Works

- 1 Plan:** Your dedicated TPx Project Manager leads discovery, timelines, and coordination to remove roadblocks and align all stakeholders from day one.
- 2 Build:** We remotely design the solution, configure your devices, and validate readiness before shipment to reduce deployment time.
- 3 Install:** When required, our field techs are sent on-site to install, test, and fine-tune. They work lockstep with the remote team to make a seamless cutover. This is an optional service available as add on to our standard project management and implementation.
