

# SASE Readiness Evaluation

Accelerate your path to modern secure access

## Modern Networking and Security—Are You Ready?

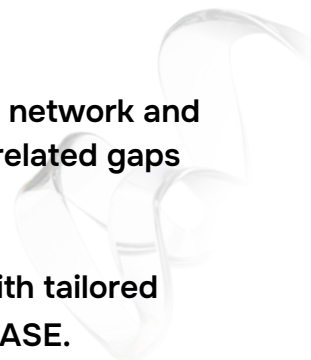

Today's businesses run on cloud apps, hybrid work, and distributed offices. But many still rely on legacy network and security setups that were not designed for this reality. As expectations rise for secure, reliable access from anywhere, SASE (Secure Access Service Edge) provides a modern way to connect and protect users, apps, and data wherever they are.

Because every organization starts in a different place, our [SASE Readiness Evaluation](#) is an expert-led consultation designed to give you clarity on where to focus next on your SASE journey.

## How It Works

During your consultation, a SASE specialist will lead a discussion around your network and security pain points, business priorities, current environment, and any SASE-related gaps or opportunities that may impact your modernization path.

Following the discussion, you'll receive a summary of key takeaways along with tailored recommendations to help you confidently accelerate your transition toward SASE.

### Take Advantage of Your Complimentary Evaluation

Claim your free 30-minute expert session and get one-on-one time with a specialist who can answer questions, share relevant context, and help you pinpoint exactly where to focus next.

It's a simple, no-pressure, no-commitment opportunity to gain actionable guidance that supports smarter decision-making and faster progress.

\*Free evaluation is limited to one per customer.
