

Managed Detection and Response (MDR)

Proactive Endpoint Protection Without the Complexity

What Is It and Why Do You Need It?

Antivirus and even Next-Gen AV can't keep up with today's attacks. Threats like zero-day exploits and ransomware often slip past traditional defenses, allowing attackers to spread quietly through your systems before causing costly damage.

TPx Managed Detection and Response (MDR) fills those gaps. We pair advanced Endpoint Detection and Response (EDR) software with 24/7 monitoring to stop threats others miss. Suspicious behavior is caught in real-time, threats are contained automatically, and security experts work to remediate issues before they disrupt your business.

The result: you get faster detection, quicker response, and reduced business impact—without having to build an in-house SOC.

Key Benefits

Benefit	What It Means for You
Stronger Endpoint Security Without Adding Staff	Protects against advanced attacks without increasing your IT headcount.
Faster Detection and Containment of Advanced Threats	Automated response and 24/7 human analysis shrink attacker dwell time from months to minutes, reducing breach damage and recovery costs.
Reduced Downtime and Business Disruption	Rapid containment prevents malware spread and keeps your employees productive instead of sidelined by incidents.
Expert Guidance for Every Incident	Incidents are not only detected but also analyzed, prioritized, and followed by clear guidance on how to respond and recover.
Predictable Cost With Enterprise-Grade Protection	Get around-the-clock security operations at a fixed, scalable monthly cost — far less than building your own SOC.

Why TPx?

24x7 Security Expertise

With around-the-clock monitoring, investigation, and containment, suspicious activity is handled quickly, even while you sleep.

Enterprise-Grade Technology

Best-in-class detection and response platform provides visibility across all endpoints.

...

Fully Managed Service

We don't just hand you a tool—we deliver a complete managed solution with technology, people, and process, so you can focus on running your business.

How It Works

Step 1: Deployment and Visibility

TPx deploys lightweight EDR agents on your endpoints to provide full visibility into activity and potential threats.

Step 2: Continuous Monitoring

All endpoints are monitored 24x7, correlating data across environments.

Step 3: Threat Detection and Hunting

Our analysts proactively hunt for suspicious behavior that bypasses traditional defenses, like privilege escalation or lateral movement.

Step 4: Rapid Containment

When a threat is identified, TPx isolates the affected endpoint, kills malicious processes, and stops attackers before they spread.

Step 5: Guided Recovery

Our team provides detailed incident reports and works with you to restore affected systems and prevent recurrence.

Find Out What Your Antivirus Misses

Even the best antivirus can't catch what it can't see. TPx Managed Detection and Response fills the gaps, detecting and stopping advanced threats before they cause damage.
