

# Network Security Evaluation

Get a Clear Picture of Your Network's Health and Risks – for Free

## What Is It and Why Do You Need It?

Your network is the foundation of your business, but hidden vulnerabilities, misconfigurations, and unmanaged traffic can leave it exposed. Without visibility, it's impossible to know where your risks lie or how to prioritize security investments.

The **TPx Network Security Evaluation (NSE)** is a **free, no-risk assessment** that reveals how your network is performing and where it's vulnerable. Our experts monitor key indicators like bandwidth use, application activity, and potential threats to give you an actionable view of your current state.

You'll receive a detailed **Network Security Evaluation Report** outlining your top risks, performance insights, and recommendations to strengthen your network security and efficiency.

**No cost. No disruption. Just clarity.**

## Benefits

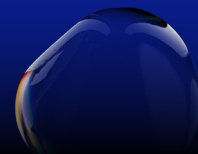

Benefit	What It Means for You
Uncover hidden threats	Identify malware, botnets, and application vulnerabilities before they cause harm.
Gain full visibility	Understand how cloud apps, remote access, and bandwidth are really being used across your network.
Validate your defenses	See if your existing security tools can detect and stop modern attacks.
Improve performance	Discover bottlenecks and resource drains affecting network speed and productivity.
Reduce risk at no cost	Get expert recommendations to fix issues – all at <b>no cost</b> to your organization.

## How It Works

- 1 Setup** – A TPx Solutions Architect installs a small Fortinet device at your site or ships you a self-install kit.
- 2 Monitoring** – We securely collect network traffic for 7-10 business days.
- 3 Reporting** – TPx analyzes your data and compiles a clear, visual report showing risks, usage, and trends.
- 4 Review** – Our experts walk you through the results and actionable next steps.
- 5 Return** – TPx retrieves the device (or you ship it back at no cost).

**Total time required:** about 30 minutes to install and 30 minutes to remove.

**Completion time:** about 2 weeks or less from start to end.

## What Is in the Network Security Evaluation Report?

At TPx, we don't just identify security gaps—we help businesses build real, sustainable cyber resilience through expert-driven risk assessments, hands-on compliance guidance, and custom advisory services tailored to your needs.

### Security

- Application vulnerabilities observed
- Malware botnet detection
- At-risk devices within the network

### Productivity

- Application categories and cloud usage
- Peer-to-peer, proxy app and remote access
- Web-based applications and browsing habits

### Utilization

- Bandwidth analysis and top consumers
- Average log rates/ sessions for sizing
- SSL utilization and encryption impact

## Why TPx?

**Superior Visibility** – Powered by FortiGuard® Labs threat intelligence, with over 3,300 application sensors and 8,100 IPS signatures for deep insight.

**Actionable Insights** – Each report includes technical recommendations to refine your security posture and optimize network utilization.

**Flexible Deployment** – Multiple setup options minimize disruption.

**Completely Free** – Many providers charge for similar evaluations – TPx delivers it at no cost.

**Expert Partnership** – Get guidance from TPx security professionals who can help you act on your results.

## See Your Network in a New Light

You can't protect what you can't see. The TPx Network Security Evaluation uncovers hidden threats, performance issues, and productivity drains, giving you the insight to make smarter, safer IT decisions.

Ask your TPx account manager for more information, visit [TPx.com](https://www.tpx.com) to schedule your evaluation.
