

SASE Comparison Guide: DIY vs. TPx Managed

Take the Complexity Out of SASE

Building and managing SASE in-house can be costly and complex. TPx makes it simple with expert design, unified management, and scalable security built for your business.

Category	DIY SASE	TPx Managed SASE
Setup & Deployment	Requires in-house expertise to research, design, and integrate multiple vendor solutions. Likely going to take 3x longer, with high failure risk.	TPx manages design, configuration, and deployment within weeks, ensuring SASE components work seamlessly together.
Vendors & Tools	You're responsible for evaluating, purchasing, and maintaining multiple vendor platforms (SD-WAN, ZTNA, firewall, etc.).	TPx partners with leading vendors to deliver and manage the right mix of solutions – you still benefit from best-of-breed tools, without the management burden.
Management & Monitoring	Internal IT must manage connectivity, troubleshoot issues, and maintain consistent performance.	TPx provides ongoing oversight, management, and support for your network and security environment.
Optimization & Performance	Performance tuning and traffic optimization require manual configuration and expertise.	TPx continuously monitors and optimizes network and application performance to maintain a consistent user experience.
Policy Enforcement	Security and access policies must be configured and maintained across different vendor systems.	TPx centralizes configuration and policy management where possible – ensuring consistency across users and locations.
Visibility & Reporting	Limited visibility across fragmented tools; requires manual data correlation.	TPx provides unified reporting and dashboards with clear visibility into network health, usage, and security posture.
Compliance & Risk Management	Compliance is manual and dependent on internal processes and staff expertise.	TPx helps align SASE configurations with industry best practices and regulatory requirements (HIPAA, PCI, etc.), reducing audit complexity.

Category	DIY SASE	TPx Managed SASE
Scalability	Scaling requires additional licenses, hardware, and configuration changes.	TPx designs scalable, cloud-based SASE environments that can easily grow with your organization.
Cost Control	Upfront tool purchases, integration costs, and internal management overhead add up quickly.	Predictable pricing for deployment, configuration, and management – no hidden tool or staffing costs.
Expertise & Support	Relies on in-house security and networking knowledge, often stretched thin.	Supported by TPx’s experienced network and security engineers who handle day-to-day management and configuration.
Time to Value	Lengthy setup, testing, and policy alignment cycles.	Faster deployment and simpler onboarding with TPx-managed implementation.
Overall Experience	Complex, fragmented, and resource-intensive to maintain.	Simplified, professionally managed, and built to fit your business needs with expert guidance from TPx.

Why Businesses Choose TPx

“With TPx, you don’t have to become a SASE expert. We bring together the right technology, design, and management to deliver a secure, connected experience without the operational burden.”

Ready to Simplify Secure Connectivity?

Bring your network and security under one managed service with TPx. Let’s build a SASE solution that fits your business, not the other way around.
